

CONSERVATION WITH THE PRIVATE SECTOR

BRIDGE

Due to the magnitude of the biodiversity funding gap, catalyzing private sector capital is a priority, as it constitutes the largest source of available resources.

Biodiversity is declining at an unprecedented rate and pressures driving this decline are intensifying.

None of the Aichi Biodiversity Targets were fully met in the last decade, there are major threats to the achievement of the Sustainable Development Goals (SDGs) and efforts to address climate change are increasing.

824 billion dollars
per year needed
to reverse the decline
of biodiversity

by 2030

25 years
managing

Conservation Trust Funds (CTFs) have become effective managers for conservation programs, providing sustainable financing for a wide range of environmental actions.

Protected areas

Blue and green economy activities

Conservation and climate change initiatives

The BRIDGE Project seeks to promote **strategic alliances** between the **private sector** and **CTFs** that are part of **RedLAC** (Latin American and Caribbean Network of Environmental Funds) and **CAFÉ** (Consortium of African Funds for the Environment), to jointly **achieve the 2030 action goals for biodiversity conservation**.

Strategic Alliances

2030 Action Targets for global biodiversity conservation

Term:
4 years
(2022-2025)

Beneficiaries:
46 CTFs present
in 44 countries from Africa,
Latin America
and the Caribbean

Budget:
4,830,000 euros, contributed by:
French Facility for Global Environment (FFEM): 2,227,500 euros
MAVA Foundation: 357,500 euros
RedLAC and CAFÉ CTFs (in kind and in cash): 2,245,000 euros

Specific objectives:

- ▶ Supporting new and existing innovative financial mechanisms
- ▶ Build communities of practice that strengthen CTFs' capabilities
- ▶ Build and manage knowledge focused on CTFs

Innovative for integrating the private sector and financial mechanisms into biodiversity conservation efforts

Comprehensive because CTFs will strengthen their capacities from different institutional perspectives

Particular because it integrates and benefits two CTF networks from different geographies
